

STARTING FLUID

With **STARTING FLUID** engines start fast and sure. This is a highly volatile fluid. Gets motors going within seconds, particularly under conditions of low temperature, frosting, icing, condensation and humidity. **STARTING FLUID** starts engines even with weak batteries, low cranking speed, also for diesels with low compression or low octane fuel.

DIRECTIONS FOR USE:

Remove safety cap. Spray directly into air cleaner, intake air stream or primer port. A burst or two is all that is necessary, then crank engine. Get instant starting in seconds.

INGREDIENTS	CAS NUMBER
DIETHYL ETHER	60-29-7
PETROLEUM DISTILLATES	142-82-5
CARBON DIOXIDE	124-38-9
MINERAL OIL	64742-53-6

Additional Information

Many conditions can make both gas and diesel engines difficult to start. Cold temperatures, weak batteries and low grade fuel are just a few. Engines that have been flooded or run out of gas pose the same problem. For a personal vehicle this situation is inconvenient, but for a professional mechanic responsible for a whole fleet, time wasted trying to start a stalled vehicle can ruin an entire work day. **STARTING FLUID** is a product that no mechanic should be without. Whether you work on gas or diesel engines large or small, this remarkable product will start a stalled or flooded engine in seconds. Instead of chewing up the battery with repeated attempts to start the engine, use **STARTING FLUID** and turn it right over. For more information on this unique product contact your local **AIS** representative.
