

EXTEND

Advanced Technology
Gear Oil Treatment

with *MSX-4*
Friction Reducer

EXTENDS OIL LIFE • REDUCES FRICTION WITH *MSX-4*
 REDUCES OPERATING TEMPERATURES
 REDUCES WEAR AND GEAR SCORING
 ADHESIVE/COHESIVE PROTECTION
 NO DRY STARTS • QUIETS NOISY GEARS & BEARINGS

Product # 3041

For Professional Use Only

EXTEND is an exceptional gear oil treatment that will enhance the performance characteristics of automotive and industrial gear oils. It will provide these additional benefits; extended oxidation stability, exceptional defoaming and demulsibility, improved seal sealing, extra rust and corrosion protection, smoother shifting of manual transmissions and reduced fuel consumption. **EXTEND** is recommended for use in manual transmissions, gear reduction units, manual transaxle assemblies, standard, posi-trac and limited slip differentials and other equipment requiring an extreme pressure gear oil.

DIRECTIONS FOR USE:

This product is engineered to treat at the following levels:

1 quart **EXTEND** to 10 quarts SAE 90 gear oil (or SAE 80w90 gear oil)

1 quart **EXTEND** to 20 quarts SAE 140 gear oil (or SAE 85w140 gear oil)

For the best results, drain the old gear oil first, then refill with the new gear oil and treat with this product.

Read all directions and cautions before using.

INGREDIENTS **CAS NUMBER**
 PETROLEUM OIL MIXTURE 8002-05-9

Additional Information

Virtually all heavy equipment, vehicles, trucks and machinery operate with some sort of gear assembly that undoubtedly requires gear oil. Most large machine tools and trucks rely a great deal on the performance of lubricants to carry heavy loads and to operate under extreme pressure. Gear oils are perhaps the most important, however, get replaced less frequently. **EXTEND** Gear Oil Treatment is a breakthrough in chemical technology that boosts the performance characteristics of conventional gear oils. This product features *MSX-4* Friction Reducer and will dramatically extend oil life and performance. Using **EXTEND** will give you extra assurance that your equipment will function properly and not be damaged due to oil breakdown. Manual transmission oil, transaxle and differential gear oils are generally changed so infrequently that the quality and durability of the oil treatment used is of extreme importance. Many repairs on gear driven machines are incredibly time consuming. Regular use of **EXTEND** can reduce the number of breakdowns by reducing the risk of seizure caused by oil failure. Contact your local **ais** representative for information on our line of high performance lubricants.
