

AMER-BRITE is a heavy duty cleaner designed to remove oxidation and stains from aluminum. **AMER-BRITE** is highly concentrated and can be diluted with up to 20 parts of water depending on the job. Some of the many uses for **AMER-BRITE** include aluminum; wheels, tanks, steps, window frames, and motor parts. **AMER-BRITE** is made exclusively for aluminum and is more effective than any other cleaner on this type of surface. **AMER-BRITE** works on contact, no scrubbing necessary, just apply and rinse.

DIRECTIONS FOR USE:

1. Dilute with 4 to 10 parts water in separate container.
2. Apply to surface by brushing, spraying, flowing, or dipping. If spraying, do not atomize. Always start from the bottom and work upwards. Let solution set 5 to 10 minutes.
3. Follow with a cold water pressure rinse starting from the bottom and work upwards.

NOTE: Always use proper safety precautions when using chemicals. Avoid contact with glass. Glass should be rinsed well after applications.

INGREDIENTS	CAS NUMBER
HYDROFLUORIC ACID	7664-39-3
SULFURIC ACID	7664-93-9
PHOSPHORIC ACID	7664-38-2

Additional Information

New or polished aluminum parts can be one of the most attractive items on a car, truck or trailer. However, aluminum by nature is very difficult to keep clean. Oxidation occurs very quickly and caustic detergents can easily stain aluminum parts. Many manufacturers of motors, truck parts, window frames, you name it, depend on the benefits of aluminum to achieve the results they desire in their finished product. Whether the aluminum is functional or decorative it needs to be kept clean. **AMER-BRITE** is specifically formulated to remove oxidation and brighten aluminum. **AMER-BRITE** works without scrubbing so the job is easy. Dilute **AMER-BRITE** with up to 20 parts water to match the mixture with the difficulty of the job, no matter how tough. Use **AMER-BRITE** to clean aluminum; wheels on trucks & cars, diesel fuel tanks, aluminum deck plating, containers, tanks, window frames, screens, manifolds, valve covers, fans, housings, siding, engine blocks, etc. Many aluminum surfaces ultimately get painted or coated with a clear epoxy. However, before you can coat aluminum you should clean and etch the surface to insure a nice appearance and more importantly good adhesion of the coating. **AMER-BRITE** cleans and etches aluminum in one easy step, saving you time and labor.
