

**C.T.D.**

**Cold Tank Degreaser**

*Removes carbon, lead, varnish, grease, film, gummy residue, oil and dirt quickly and easily.*

**C.T.D.** is more effective than gasoline and oil additive carburetor cleaners. Completely cleans carburetor parts, helps lengthen motor life by reducing carburetor wear. Parts work easier, harmless to metal and helps to improve fuel consumption by thoroughly cleaning carbon from carburetor.

- **LOW ODOR**
- **SAFE ON ALL METALS**
- **FAST ACTING**
- **LONG LASTING**

**DIRECTION FOR USE:**

**DO NOT DILUTE.** Consists of (2) two parts. A volatile solvent and a chromic acid sealer (floated on top of the solvent to retard evaporation).

1. Submerge parts to be cleaned making sure they are beneath the sealer.
2. Let stay submerged 15 to 30 minutes.
3. Remove and rinse with petroleum spirits or water.
4. Blow dry with air hose.

INGREDIENTS	CAS NUMBER
METHYLENE CHLORIDE	75-09-2
PHENOL	109-95-2
CRESYLIC ACID	95-48-7
POTASSIUM HYDROXIDE	1310-50-3

## Additional Information

**C.T.D.** Cold Tank Degreaser is a powerful product designed for commercial fleet maintenance. With **C.T.D.** the user gets the results commonly found with sophisticated heated tanks and special chemicals, without the need for expensive equipment or bulky tanks. The most common use for dip tanks is carburetors, induction systems, and engine blocks because of the heavy carbon build-up and fuel varnishing on these parts. **C.T.D.** features a powerful solvent cleaner that normally would evaporate quickly, however, we have packaged it with a chromic acid sealer (top layer) to retard evaporation. This packaging gives the user a long lasting, effective option to removing carbon, lead, varnish, grease and even unwanted paint without scrubbing or scraping. **C.T.D.** is safe on all metal parts and will not blacken any metal. **C.T.D.** contains no alkalis and is the fastest way to rejuvenate metal parts. Contact your local **ais** representative for more information on **C.T.D.**
